The game has multiplayer mode over network. Counts as 2 points.	0
The game was full 3D game with controllable camera.	0
The game was 3D game in a 2D environment.	0
The game has intro segment or intro animation.	1
The game has end sequence, end credits, or other completion/winning animation sequence.	0
The game has minigames, or game activities require playing separate minigames.	0
There is some form of economy system in the game (player can collect stuff and buy stuff). Counts as 2 points.	0

Total number of points from the features in the game:	15
--	-----------

Part 2: Your views: Grade with number from 0 to 10 (10 being the best)

How close to the original idea the implementation got?	3
How ambitious the original plan was?	8
How well did your selection of tools work in practice?	7
How would you rate your advertisement against generic game advertisements you sometimes see in social media?	5
How finalized or complete as a product demo you think this game was?	7

Part 3: Open comments

Write in the box below your reasonings for the given Part 2 grades.
Originally, I was thinking of making a 2D Souls-like Metroidvania game, similar to Hollow Knight. However, I faced some technical challenges during development. I initially started with one character and fewer objects, but the project expanded as I continued developing it.
Write in the text below your other comments concerning this game or this project, if you have any.
First game ever. Biggest lesson: scoping down early let me finish something polished instead of leaving a bigger idea unfinished
