Question	Yes	No	N/A	Note
Document Control				
Verify whether document control procedures have been followed by checking for the following:				
Does the title page contain the document name, version number, FPT name and logo, project code, document code and issued date?				
Does the header and footer correctly specify the name, and version of the document?				
Does the page – numbering scheme indicate the total number of pages in the document?				
Have details been entered in the 'Approval' and 'Reviewers' fields in Signature page?				
Is the history traceable?				
Are all documents checked Spelling and Grammar in MS Word or similar tools?				
Use Case Checklist				
Is the goal, or measurable value, of the use case clear?				
Is the use case a stand-alone, discrete task?				
Do any use cases have very similar behaviors or flows of events? If so - and if you wish their behavior to be similar in the future - you should merge them into a single use case.				
Has part of the flow of events already been modeled as another use case? If so, you can have the new use case use the old one.				
Is some part of the flow of events already part of another use case? If so, you should extract this subflow and have it be used by the use cases in question.				
Do customers and users alike understand the names and descriptions of the use cases?				
Is it clear which actor(s) benefit from the use case?				
Does the communication sequence between actor and use case conform to the user's expectations?				
Is it clear how and when the use case's flow of events starts and ends?				
Is the use case free of design and implementation details?				
Are all anticipated alternative courses documented?				
Are there any common action sequences that could be split into separate use cases?				
Is every actor and step in the use case pertinent to performing that task?				
Have all user-defined scenarios been covered in use-cases?				
Have all Actors been identified in the system?				
Do the use-cases have a natural flow as envisaged for the application?				
Are there entry-criteria and exit-criteria for each use-case?				
Are the commonly occurring situations (like error handling) been captured as Use cases?				
In all use cases check for the following				
Are all screens clearly specified?				

Are all reports clearly specified?				
<Add more rows if needed>				

*** Comments**

*** Suggestion**

- [] - Pass
- [] - Review again
- [] - Other

*** Note**

*Check whether standards for reports are clearly stated**

security and access control
