Project researcher and doctoral student

Tutorial 5

Reflection-in-Action

Few words about tutorial assignments

- If it is groupwork, work in groups! -) if there are problems in the groups contact me, Annika or Tanvir
- Remember: AI statement, your name, answer all the questions!
- My grading: If there is something to note, I write a note. If not, I write just a short comment.

3 sessions about creativity

- Today focus on individual creativity
- Next 2 sessions creativity in groups

REFLECTION-IN-ACTION

- “The reflective designer is someone who is driven by practical concerns, but who is also able to step back for a moment and reflect on what works, what doesn't work, and why.”

Donald Schön in Bringing Design to Software

AIM OF TODAY'S EXERCISE

- Start training in reflection-in-action with a “simple” yet challenging exercise. Work individually to be able to dive into one’s own thoughts and processes. There is no right way or wrong way to do the exercise, just do it!
- Follow the rules, even if they might not make sense to you!

100 LINES! Design brief:

- Problem description: We need around 25 series of 100 different lines that are hand-drawn on paper. We got 25 students, so **each student draws one 100 lines series**. In this 100-line series each line should be drawn by the same person.
- Goals: The participant's 100 lines are used to engage in reflection-in-action on their design processes
- Budget: 0 (use what is available for free)
- Time: 40 mins

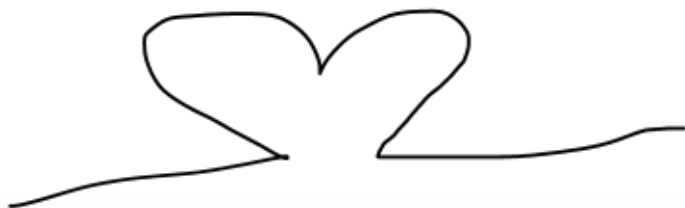

100 LINES! Design brief:

- Constraints:
 - 1) The lines need to be hand drawn on big sheets of paper.
 - 2) Several sheets may be used but only on one side.
 - 3) The lines should not cross each other.
 - 4) Each line should be numbered and named.
 - 5) A line is not a picture, so you must not draw pictures!

NOTE #1

- A LINE is not a picture, so please don't

1. Heart

2. Palm tree

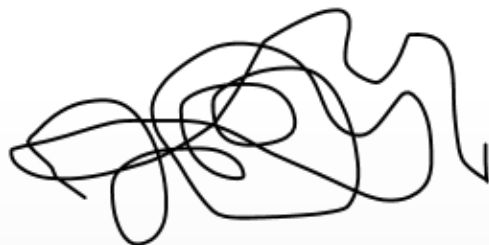

NOTE #2

- Examples:

Abstract

1. Life

Descriptive

2. Sick airplane

Remember to give a number and name to each line!

NOTE #3

- You are free to choose how you produce the lines: You can stand, sit, move, go to another location, use headphones, drink coffee, change pens, call someone... just don't disturb your fellow classmates! You are free to test more than one methods and see how changing the methods impact the exercise and your results. BUT Focus!

NOTE #4

- Keep to the design brief
- Keep mental notes about your process and be honest about your process (reflection-in-action)

Creativity / problem-solving / process / obstacles / flow / intuition / inspiration / spontaneity / uncertainty /

ANALYSIS: PAIR WITH ANOTHER CLASSMATE

PART 1: getting ideas

- When it was difficult to get new ideas?
- How did you get out of this “valley of death” of no ideas?
- In which state did you get into a “flow” situation, when you produced many lines?
- What were the reasons or things which had an effect in the change from “valley of death” to “flow” (for instance: going to another room, changing the pen or the colour, reformulating your thoughts, actively looking for inspiration...)

ANALYSIS: PAIR WITH ANOTHER CLASSMATE

PART 2: continuity of ideas

- Look if in a group of several lines you find continuity in a theme or in the shape of the line (variations from one original idea) or are you more jumping from one idea to the other and back?
- Is the continuity related to the shape of the line or the theme and naming?
- Do you get back to some theme or shape you have been working earlier and elaborated on them in a new way?
- Have a look to the way you use the paper: When you take a new piece of paper is it starting a new idea or theme? Do you lose your flow when you change from one paper to another?

ANALYSIS: PAIR WITH ANOTHER CLASSMATE

PART 3: Syntactic and semantic

- Study your lines by separating A) syntactic development from B) semantic development, and from C) syntactic-semantic
- A) Syntactic: the series of lines (group of lines) look alike because of their shape or style -) mark these with SY
- B) Semantic: the developing of the lines has been guided by similar kind of theme in the naming (for example: the lines are about traveling) -) mark these with SE
- C) Synthetic and semantic: probably these both have been developing at the same time so both the name of the line and the shape remind each other -) mark these lines with SYSE

ANALYSIS: PAIR WITH ANOTHER CLASSMATE

PART 4: Most interesting and favourite lines

- Any other insights? Did you notice something interesting in your pair's lines?
- Mark your own favourite lines by circling the number (5 to 10)
- Time: 25-30 minutes

PLENARY

- Did you question the problem? Would you have wanted to change the brief?
- Did you plan and stick to the plan? Or did you just go with the flow?
- Could you identify a process? What was it?
- Is the process you have followed one that you usually go through in other (design/problem solving) situations? Or was it different because of the nature of the design brief, or the material used, or the situation?
- What were external factors that affected your process?
- Are you satisfied with the outcome?
- What did you learn?

Submit

- Take good quality pictures of your 100 lines
- Write a reflection paragraph about your key take aways from the exercise
- Submit the pictures and the reflection text in one PDF to Moodle

Submit as one PDF to Moodle
Deadline on 7.10 at 11:59 PM
